Human and natrue

DODO RCASU 01

Und☼r th☼ sun

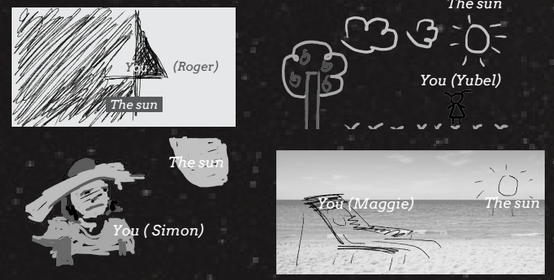
Throughout history, humankind has scarcely reached consensus on any matter, yet on one point there exists remarkable unanimity—that the head of a deity emits light.

Inspiration

Before humans possessed language for communication, there had scarcely been consensus on any matter throughout antiquity; yet on one point there existed remarkable unanimity—that the head of a deity would emit light.

Primary research

Throughout history, the sun has played a central role in the religious and spiritual beliefs of many ancient civilizations.

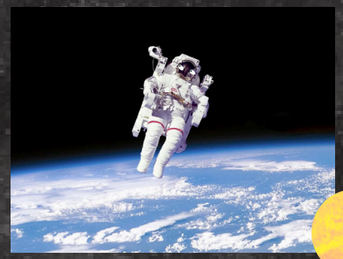


*When you think of the sun, what are the **first three words** that spring to mind?*

GOD
Egypt
love
light
Warm
happiness
bad
yellow
energy
far
grass
summer

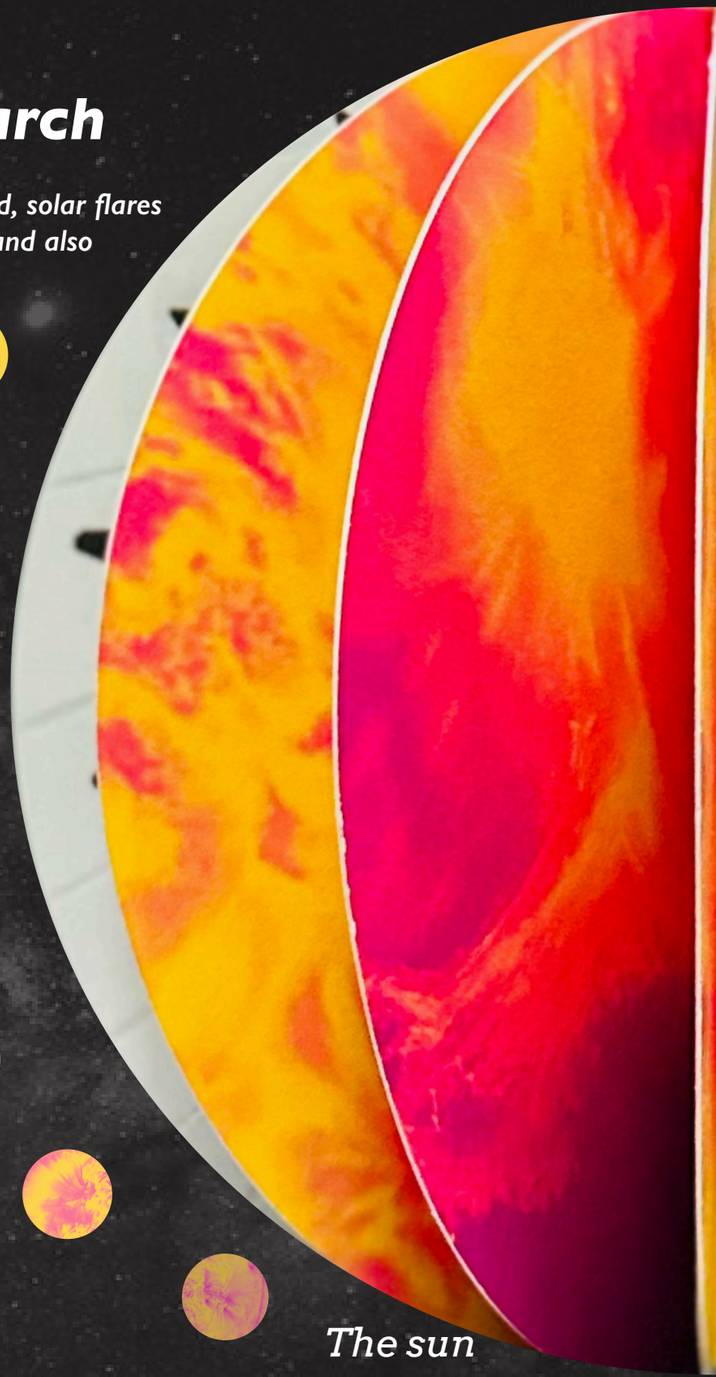
Secondary research

I researched the shapes of solar wind, solar flares and sunspots on the NASA website and also performed effect processing.



You

*The sun element, rendered as a circle in the print media section, appears in a highly saturated yellow hue. It rotates independently, with all circles incorporating **highly abstracted, distilled details** of the sun. Positioned precisely at the centre of the handmade book's rectangular layout, the circular sun seems to gaze upon the surrounding projections and imaginings of human civilisation.*

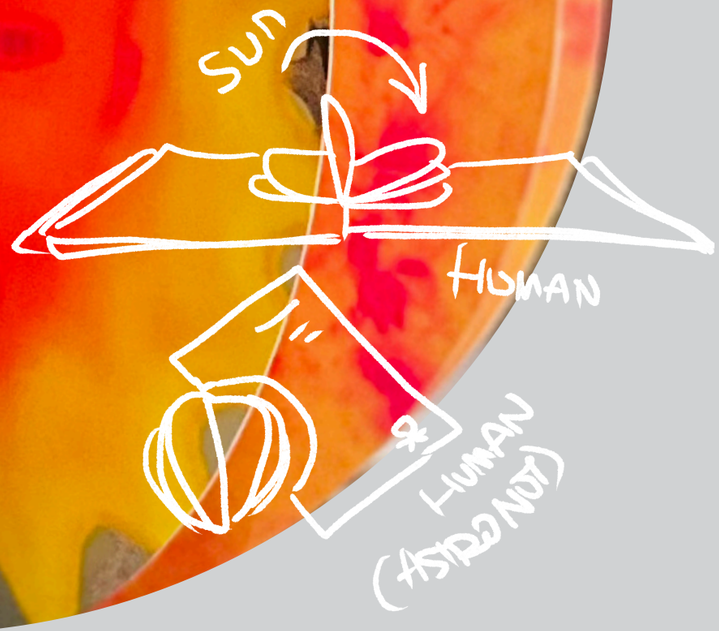


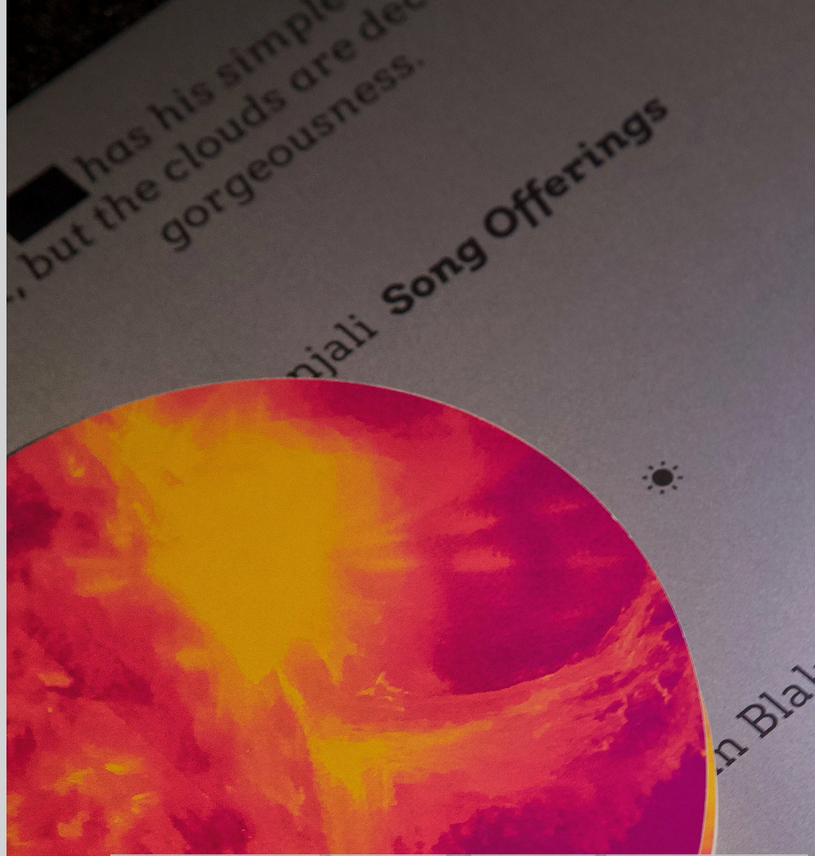
The sun

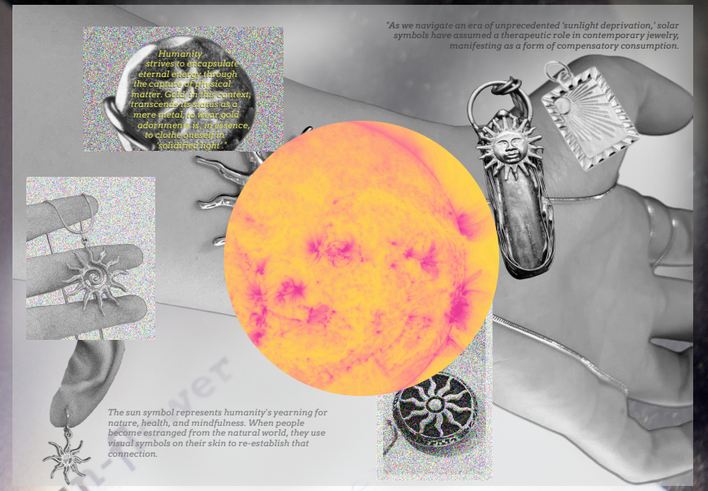
Concept

All human civilisational artefacts associated with the Sun are projections of self-awareness, whereas the Sun itself remains merely an objectively existing, emotionless entity.

Book Design (sketch)

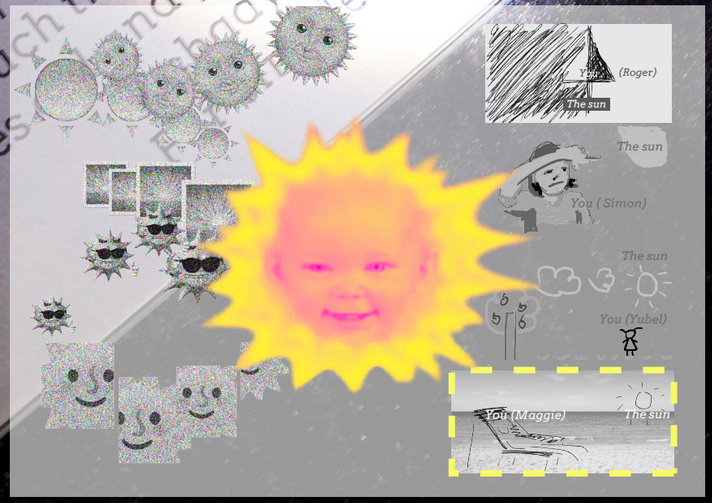






Decorations

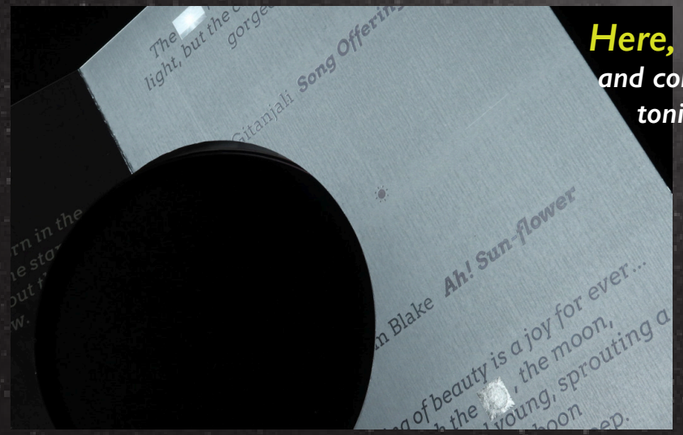
Films



Emojis

Outcome

Beyond films and decorations, numerous religions, political ideologies, philosophies, products, architectural forms, and even memes all represent humanity's "imbuing" of meaning upon the sun.



Here, *mirror silver and color-changing toning silver are used.*
